

# Preventing Arson at Construction Sites

**Awareness is key. Everyone can help to prevent arson at construction sites.**

## First responders/Inspectors:

-  If there has been negative press about the project, remind workers to be vigilant on the job site.
-  Make unannounced inspections to assess the project, activities and the job site.
-  Perform site planning and preplanning throughout the building process.
-  Invite surrounding fire departments/companies to assist in the pre-fire plan.
-  Take photos of anything you believe is a potential hazard and inform the job site manager.

## For more information:

The National Association of State Fire Marshals offers free construction fire safety online training courses:

-  First Responders.
-  Building Inspector Fire Safety Course.
-  Overview for Safety Managers and Owners.
-  Construction Workers Fire Safety Course.
